Projects:

Railway Regency: An Android Application

- **Duration:** August 2017- November 2017
- **Skills & Tools:** Android, Java, Json, SQL, Firebase, JSoup
- **Platform:** Android Studio
- **Type:** Group Project.
- **Roles and Responsibilities:** Responsible for developing the database and Front-end of the App.

An interactive mobile android application that enlists the trains by taking source station, destination station, date, and quota. Based on this information the available trains for the route will be displayed along with the fare and the days of the week it runs. Our focus is on minimizing the time an end-user has to wait so as to get ticket availability from a station with minimum waiting or with the desired fare. Following are the functionalities of App:

- Users can set a reminder for the source-destination station on a particular train and they will be notified when less than 5 tickets are available for that train.
- Live Trains status
- PNR Status

Polaris: An Android Application

- **Duration:** November 2017- December 2017
- **Skills & Tools:** Android, Java, Json, Firebase
- **Platform:** Android Studio
- **Type:** Individual Project
- **Available in Google Play Store.**

Polaris is a national level technical symposium of Shri Ramdeobaba College of Engineering and Management.

Unique features of the Polaris app-

- Details of all events.
- The QR feature works as digital receipts.
- The Profiles section allows login to only participating users thus avoiding any discrepancies and also avail to see their QR Code
- The Notice section of the app enables users to see notifications and latest updates
